SUMMARY
Senior product manager, 7 years; owns integration and data platforms in logistics and supply chain.

EXPERIENCE
Senior Product Manager, Integrations | Shipyaar (Series B freight platform, 180 people) | 2021 – Present
- Sole product owner for the carrier and ERP integration layer; reported to the CEO, no product leadership above me
- Decided to stop building bespoke per-customer connectors and instead ship a configurable mapping layer; took the call against sales pressure, lost one deal in the process, and the change cut new-customer integration time from 9 weeks to 2
- Launched EDI connectivity with 3 major shipping lines, which unblocked a stalled contract with the company's then-largest prospect (closed within the quarter)
- Defined data-quality SLAs (event latency, missing milestone rate) and published a weekly reliability report to customers; missing-milestone rate fell from 11% to 3% over 3 quarters
- Wrote the product team's first decision log template; every roadmap change since has a written rationale

Product Manager | Movelane (early-stage 3PL software) | 2018 – 2021
- Spent the first month working shifts at a client warehouse to understand inbound receiving before scoping the ASN feature
- Killed an in-house tracking map after discovering customers exported everything to Excel anyway; replaced it with scheduled exports, which became the most-used feature

Operations Analyst | Transcargo Freight | 2016 – 2018
- Handled customs documentation escalations for 40+ importer accounts

EDUCATION
B.E. Mechanical | Pune University | 2012 – 2016
